

APPCONADJSirius 125/600/-/316/STHT/ICID+

Our new Sirius Plus Double Wall Adjustable Starter Section is an easy and quick way of disconnecting a stove for inspection, as well as being very easy to install. It's ideal to allow chimney sweeps to sweep and inspect an existing chimney flue.

It's exceptionally easy to install. The process involves inserting a male spigot of the liner into the appliance spigot, sealing it, insulating it and then simply sliding down the case to cover the stove spigot. Removal for servicing and re-installation is just as easy and is the reverse.
