***Please note that this will take you to our partner site: Maison Flair, where you can purchase this and other items.***

The Qube Corten Steel Pellet Patio Heater is a square pillar patio heater. It offers you an excellent alternative to gas patio heaters without the noise, smell and bulky size. Delivery includes a 15KG bag of wood pellets and 1 litre of bio gel so you can enjoy your patio heater immediately!

### PRODUCT DESCRIPTION

The Qube CORTEN Steel Pellet Patio Heater is a square free-standing patio heater and an excellent alternative to a gas patio heater without the noise, smell and bulky size. Why not lengthen the season you enjoy evenings in your outdoor space? Don't abandon your garden on chilly evenings, instead gather loved ones in warmth and comfort outside.

The square patio heater uses the innovative Primato technology. The technology uses a constant micro-gasification process that converts dry biomass to charcoal and gas. This method ensures that the Qube has a very stable flame and heat output. Modern engineering completely removes smoke from ignition to extinction and results in extreme ease of use.

The free-standing patio heater is 130cm high and has an output of 4.5kW produced by 3.5kg of pellets. Moreover, a rechargeable power bank powers a fan that enables the gasification process of the pellets thereby creating continuous stable flames. As a result, enjoy the heat radiation up to 2 metres from the heater.

Your order includes delivery of a 10kg bag of wood pellets and 1 litre of bio gel so you can enjoy your outdoor patio heater immediately!

To fire up the patio heater, firstly open the side to access the biofuel container. Secondly, remove the container to fill it with wood

pellets and last but not least, add a little [eco bio gel fuel](#) on top so you can kickstart the fire in seconds.

In addition, the outdoor patio heater is available in [black](#) and Corten or as a [round pillar](#) and weighs 38KG. Add [wheels](#) to easily move the heater around.

### WHY BUY A STEEL PELLETT PATIO HEATER?

The Qube Steel pellet patio heater benefits from a modern design, beautiful in its simplicity. Store the biofuel in a stainless steel container, easily accessible and easy to refill. Wood pellets are a renewable fuel, environmentally friendly & energy efficient.

Sustainable biofuel, wood pellets are made of organic matter like wood, forest residues and sawdust. The wood pellets are highly combustible and efficient in use because of their minimal moisture contents. Always store pellets in a dry environment.
